

Response to DNR Data Request No. 1
Maryland Public Service Commission Case No. 9127
UniStar Nuclear Energy, LLC and UniStar Nuclear Operating Services, LLC

Question 1-12

Please provide an update on the status of Maryland DNR's review of potential impacts to threatened and endangered species, especially the newly discovered bald eagle nest within the Unit 3 footprint.

RESPONSE

There is no current Maryland DNR update on the potential impacts to threatened and endangered species. As it is early in the nesting season, there is no report on the current usage at the eagle nest located within the CCNPP Unit 3 footprint. UniStar is, however, proceeding forward in plans to work with the appropriate State and Federal agencies to identify possible options available should the pair return to nest during 2008, including providing alternative nesting sites.
